

```

1.3 // Assume n holds the length of arr
2 double fast_product(double *arr, int n) {
3     double product = 1;
4     #pragma omp parallel for
5     for (int i = 0; i < n; i++) {
6         product *= arr[i];
7     }
8     return product;
9 }

```

(a) What is wrong with this code?

The code has the shared variable product.

(b) Fix the code using `#pragma omp critical`

```

1 double fast_product(double *arr, int n) {
2     double product = 1;
3     #pragma omp parallel for
4     for (int i = 0; i < n; i++) {
5         #pragma omp critical
6         product *= arr[i];
7     }
8     return product;
9 }

```

(c) Fix the code using `#pragma omp reduction(operation: var)`.

```

1 double fast_product(double *arr, int n) {
2     double product = 1;
3     #pragma omp parallel for reduction(*: product)
4     for (int i = 0; i < n; i++) {
5         product *= arr[i];
6     }
7     return product;
8 }

```

2 Logic Gates

2.1 Label the following logic gates:

NOT, AND, OR, XOR, NAND, NOR, XNOR

2.2 Convert the following to boolean expressions:

(a) NAND
