Problem 24

Three distinct segments are chosen at random among the segments whose end-points are the vertices of a regular 12-gon. What is the probability that the lengths of these three segments are the three side lengths of a triangle with positive area?

一个正十二边形的顶点两两相连所形成的所有线段中,任意选择3根不同的线段(这3条线 段中可能存在等长的线段),问这三根线段能够组成一个面积为正的三角形的概率是多少?

- (B) $\frac{443}{572}$ (C) $\frac{111}{143}$

Problem 25

Let $f:\mathbb{C}\to\mathbb{C}$ be defined by $f(z)=z^2+iz+1$. How many complex numbers z are there such that $\mathrm{Im}(z)>0$ and both the real and the imaginary parts of f(z) are integers with absolute value at most 10?

f是定义在复数域上的一个函数, $f: \mathbb{C} \to \mathbb{C}$, 且 $f(z) = z^2 + iz + 1$, 有多少个这样的复数 z存在,满足 $\mathrm{Im}(z)>0$ (z的虚部大于 0) ,且f(z)的实部和虚部都是绝对值至多为 10 的整 数?

- (A) 399
- **(B)** 401
- (C) 413
- **(D)** 431
- **(E)** 441
